

## Cost Effective Wi-Fi for Schools

Schools of all sizes and types including primary schools, secondary schools and colleges are being challenged to move up to higher speed, more reliable Wi-Fi with strong security, excellent coverage and connections that don't drop. What's more Wi-Fi has to go to places where no Ethernet cabling has gone before, such as temporary classrooms, common areas and to every corner of the campus, and yet for most educational establishments, tighter budgets make the transition impossible.

Ruckus Smart Wi-Fi is the first technology to give schools a cost-effective wireless infrastructure that provides robust, complete coverage and the best performance at an affordable price.

## With Ruckus Smart Wi-Fi, Schools Benefit From:

- Consistent, reliable connectivity that no other Wi-Fi systems can touch
- 2 to 4 times the coverage using fewer AP's
- Low packet loss and high performance
- A safer environment with less interference, through "eco-friendly" adaptive signal technology
- System self-healing capabilities
- The lowest cost of ownership
- Support for 802.1x, WPA (PSK) and WPA-2 (AES) security plus automatic wireless setting and encryption key security
